John and Chuck,

Attached is a brief Tech Memo submitted by the Army for the Phase 2 PFAS ESI sampling of sites 25 and 26 (the fire training areas). The Army conducted the GW sampling in October 2019.

The Expanded Site Investigation (ESI) is being conducted by the Army in phases. This is Phase 2. We had a conference call with the Army and NYSDEC last July during which we discussed the Phase 1 data and the Army's recommendations for Phase 2 GW sampling locations. We eventually reached agreement on the Phase 2 locations and depths. I believe the Army indicated it would conduct sampling of the deeper aquifer later during the eventual RI.

Sharissa was involved in that call and the followup but with her departure I brought John up to speed on the sites and forwarded him a # of documents. I realize that was a while ago John so feel free to ask me any questions you might have. I am mainly looking for any comments from John. Chuck feel free to weigh in if you so choose.

The file contains validated data from the Phase 2 sampling as well as the Army's recommendations for additional sampling, which I guess will be called Phase 3 of the ESI. Progress has been somewhat slow on this in terms of how far out the Army has expanded the original fire training area investigations. I have not looked at the recommendations yet but I expect more of the same in terms of how far out the proposed sampling will go.

John: please provide any comments on the recommended additional sampling (and on the Phase 2 data if you have any) by February 4. Please let me know if you have any questions.

Thanks a lot!

Bob
